

Telephone Number Whitelisting & Spam Label Remediation Guide

Overview

Mobile carriers and third-party analytics providers actively monitor outbound calling behavior to identify and block illegal robocalls and spam traffic. Legitimate businesses can occasionally have their telephone numbers incorrectly labeled as “Spam Likely,” “Scam Risk,” “Potential Spam,” or “Robocaller,” or blocked entirely by carrier robocall mitigation systems.

This document explains why legitimate numbers become blocked or labeled, how carrier reputation systems work, and the recommended remediation process for restoring normal call delivery.

Recommended Remediation Process

Step 1 — Confirm the Issue

Identify all affected telephone numbers, determine which carriers are impacted, and document examples of blocked or mislabeled calls.

Step 2 — Register Numbers with Industry Reputation Platforms

Register affected numbers with industry analytics and caller reputation platforms.

Step 3 — Submit Reputation Review Requests

If numbers remain flagged after registration, submit formal remediation requests directly to carriers and analytics providers.

Carrier & Reputation Management Portals

The following portals are commonly used to submit spam labeling disputes, false-positive remediation requests, and caller reputation reviews:

- AT&T; Call Label Review: www.att.com/reviewmycalllabel
 - Verizon Voice Spam Feedback Portal: www.voicespamfeedback.com/vsf/
 - T-Mobile Call Reporting Portal: callreporting.t-mobile.com
 - Free Caller Registry: freecallerregistry.com/fcr/
 - Hiya Reputation Request Form: hiyahelp.zendesk.com/hc/en-us/requests/new
 - First Orion Contact & Reputation Requests: firstorion.com/contact/
 - TNS Call Guardian & Reputation Services: tnsi.com/solutions/communications/call-authentication-and-branding/
 - FCC Consumer Complaint Center: consumercomplaints.fcc.gov/hc/en-us
-

Summary

To reduce spam labeling and restore outbound call deliverability, businesses should register affected numbers, submit remediation requests to carriers and analytics providers, and continuously monitor outbound caller reputation.
