support@bullfrog.net

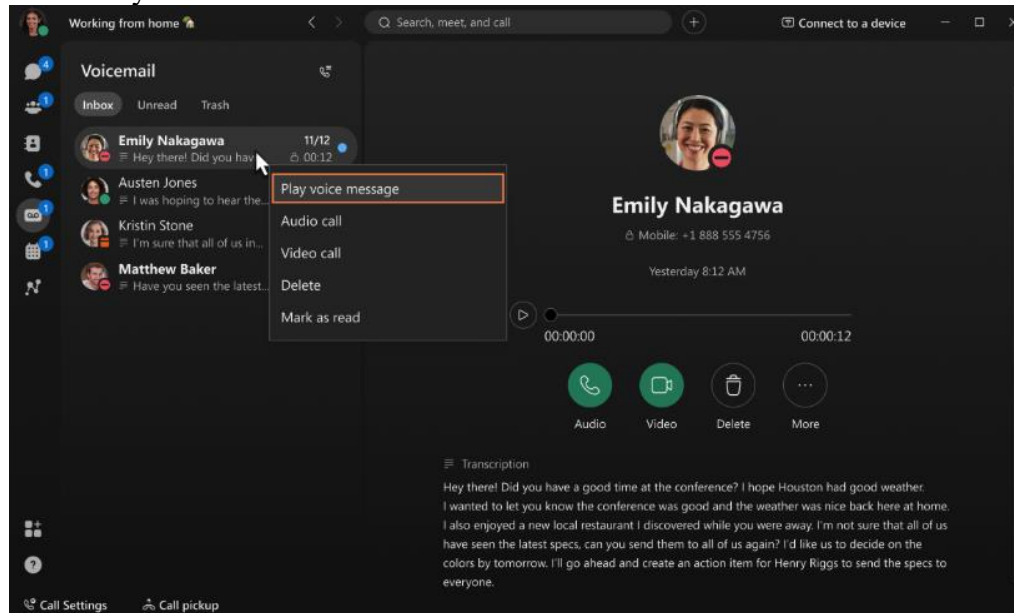

❖ Sign in for the first time

- The first time you sign in to the Webex App you receive a **six-digit confirmation PIN** to verify your email address. Then, you will **create your password** and sign in.
 - *Note: You will not receive a PIN if your organization uses Single Sign-On (SSO) to sign in to Webex App.*

❖ Voicemail

- **All Default Voicemail PINs will be 002468.** Upon logging into the voicemail for the first time, you will be prompted to create a new PIN.
- You can use your phone, User Hub, or the Webex App to manage all your voicemail and its settings. These settings sync between applications when saved.
- **Calling your Voicemail to record a greeting**
 - Open the **Webex App**
 - On the left-hand side menu, Click the **Voicemail Icon** 
 - Click the **Call Voicemail Icon**  that is found near the top of your message history in the Voicemail tab.
 - Enter your Voicemail PIN
 - **Press 1** to go to the Voicemail Menu
 - ◆ **Press 1** to listen to Messages
 - ◆ **Press 2** to change **Mailbox Busy Greeting**
 - ◆ **Press 3** to change **No Answer Greeting**
 - ◆ **Press 4** to **Modify Extended Away Greeting (DO NOT TOGGLE)**
 - ◆ **Press 7** to **Delete All Messages**
 - **Press 3** to go to the Greeting Menu to change your Name
 - ◆ **Press 1** to record your name,
 - ◆ **Press 2** to play the current name recording.
- **Reset your Voicemail PIN**
 - Sign in to **User Hub (user.webex.com)**
 - ***Note:** Your Webex login credentials are the same across the Contact Center, the Webex App, and User Hub.*
 - Go to **Settings>Calling>Voicemail**
 - Go to the **Voicemail PIN** section and then click **Reset Voicemail PIN**.
 - Enter your **New Voicemail PIN** within the following requirements:
 - Must be at least six digits long and a maximum of 8 digits. Numbers only.
 - Must not be any of your previous ten PINs. This number is a system setting.
 - Must not be the reverse order of your old PIN.
 - Must not match the numeric representation of your first or last name.
 - Must not contain your phone number or extension number.

- Must not contain single or groups of repeated digits (for example, 228883, 121212, or 408408)
- Must not be a numerical sequence (for example, 012345 or 987654).
- Must not contain numbers that are dialed in a straight line on the keypad.
- Re-Enter your PIN in **Confirm Voicemail PIN** and click **Submit**.

➤ Listening to your Voicemail

▪ DESKTOP

- Go to **Voicemail**  on the lefthand sidebar, choose a message, and then listen to the message in one of the following ways:
 - ◆ Right-click the message and choose **Play Voice Message**
 - ◆ Click **Play**  in the window that opens to the right.
 - ◆ Voicemail messages may show one of these indicators:
 -  Exclamation – Indicates an urgent, important voice message
 -  Key – Indicates a private voice message. You cannot forward private messages to other people.

▪ MOBILE

- Go to  and then tap **Voicemail** at the top of your **Call History**
- Choose a message, and then in the **Voicemail information** window, tap **Play** 
- Tap  in the top right-hand corner, select **Call Voicemail** (small phone with cassette tape), and then follow the prompts to access more voicemail features, such as setting your **personalized greeting**. You will need your PIN to access these features, if you need to reset your PIN please refer to earlier in the guide.

❖ Calling from the Webex App

- When in a call, you will see a menu at the bottom of the call window.
 - To **Transfer**, **Conference**, or to place the call on **Hold**, select the icon that has three dots .
 - In the same menu, you can also select to turn the audio call into a Webex Meeting. You can also export call data and statistics to assist with administrator troubleshooting.
- **Features**
 - **Put a Call on Hold:** If you're on a phone call with someone and you get interrupted by something else that you need to take care of, you can put the call on hold and resume it when you're free to chat again.
 - **Transfer a Call:** When you're on a call, you can transfer that call to someone else
 - **Forward a Call:** If you're going to be away from your desk but don't want to miss an important phone call, you can forward your calls to another phone number.
 - **Add someone to your contacts:** You can add people to your contacts list, making it easier to connect with the people you message and call most often.
- **User Availability**
 - *You can see other people's availability in the Webex App. If you need to contact someone, check to see if they're actively using the app. This makes it easy to know if others are available to respond to messages.*
 - Go to your **Profile Icon** in the top left-hand corner
 - **Availability**

 Airplane—The out of office reply is set in Microsoft Outlook.

 Orange icon—Busy.

 Red icon—Do not disturb.

 Moon—In quiet hours.

 Arrow—Sharing a screen or application.

 Meeting—In a meeting.

 Call—On a call.

 Green icon—Active in the last 10 minutes.

 Clock—Not active.

➤ Quiet Hours

- *A setting that controls when you receive notifications. You can think of it as Do Not Disturb. It will synchronize across all Webex devices.*
- Go to **Availability**, then click on **Manage Quiet Hours**, enter your custom schedule to configure your **Quiet Hours**, then select **Save**.

➤ Audio Settings

- Click **Settings**  on the navigation sidebar, and select **Audio**.
 - Choose the devices to use as main ringer/speaker/microphone. You can adjust the volume of your speaker and microphone from here. If you want the app to automatically optimize the microphone volume for you, check **Automatically Adjust Volume**.
 - Choose the **Follow system setting** to use a device that's configured as the default option on your system. When you change the audio device for your operating system, the app follows the change accordingly. To see what device you currently have set up as the default, go to **Start>Settings>System>Sound**
 - ♦ **Note:** For Mac devices, go to **System Preferences> Sound**
 - Choose the volume of the incoming call ringtone and message alert sounds.
 - ♦ Click **Test** to test the volume level. The ringtone that you chose in **Notifications>Calling** is played

- Check the **Unmute temporarily by holding Spacebar** check box so you can quickly unmute yourself temporarily during a meeting.
- Click **Smart Audio** and under **Microphone audio** choose from the following:
 - Select **Noise Removal** to join your meetings and calls without worrying about background noise, such as keyboard typing and doorbells.
 - Select **Optimize for my voice** to remove background speech and noise when you're in a noisy environment where others are talking.
 - Select **Optimize for all voices** to remove background noise and enhance all voices nearby.
 - Select **Music** mode to preserve the microphone's original sound when using your computer for audio. In other words, there will be NO audio filtering.
- Under **External audio**, choose from the following:
 - **Optimize for external party's voice** – to remove all noise
 - **Original (Default)** –no processing
